

# Recap

- **Python fundamentals**
- **GUI vs CLI**
- **Paths: relative + absolute**
- **Working with UNIX commands and file paths**
- **Development environments**
- **Jupyter Notebook**

# Git

Software installed locally on  
your computer for  
**(distributed) version  
control**

# Github

Hosting service for your **Git**  
**repositories**, making it  
easier to push and pull from  
collaborators

Working  
directory in git

# **Github Enterprise (GHE)**

- **Professional application of Github**
- **Repository data is stored on private networks or local machines/networks**
- **Like Github, based on the Git language**
